### **GSMStockMarket Marketplace Tasks to be completed by**

**Monday 4<sup>th</sup> May 2015.**

I will try do a page by page breakdown of everything that needs to function but please also check previous spec and other notes made in chat as some features can't even be tested due to the state of this marketplace.

#### **Create Listing > Create Buy/Sell Listing**

1. Schedule Listing box needs to move down to the bottom just above listing duration. It shouldn't show a schedule date/time unless specified, this should be blank as it will list now. **Reference ticket #150**  
Also if you set a date/time and click list now it goes to my listing. Surely if it's got a set time/date then its scheduled and should go into saved? Makes no sense.  
*The calender point is theme issues, which I have already mentioned to Daniel, I used the Bootstrap calendar as well it was also giving the same issue.*
2. MPN/ISBN isn't a required field. This is more to complement the listing if the data is available. This data will query our database and auto fill the rest if we have a matching number for the user.  
*Based on Initial explanation Other related data which was getting auto populate (Color, type, model etc) in order to make that happen it was required MPN/ISBN to be mandatory, and that is what was explained. I will make it non mandatory fields that's not an issue.*
3. Make and models should be linked in some way. Models will be assigned a make in some way so users can't accidentally make a listing for Samsung iPhone 5.  
*These is new point, initially Make and models was associated with MPN/ISBN and based on selection of MPN/ISBN make models data is getting populated. If user remove the data from Make, model, color field still they can select different data from drop down menu which is saved in database. Basically what needs to be done now is we need to make sure if Make is Samsung then related models of samsung should be filtered in Models. These point was never explained and is new to us, and will take time for implementation.*

4. The make, model, colour, needs to be a proper dropdown which sticks to our fixed definitions. Currently it has a sort of drop down feature but it's more of an auto fill. I can type Samsung but then change it to Sa02ism if I wanted and still list the items. These makes need to conform to what we set in the admin panel. **Reference ticket #150**

Our template you can see here:

[http://webappplayers.com/inspinia\\_admin-v2.0/form\\_advanced.html](http://webappplayers.com/inspinia_admin-v2.0/form_advanced.html) view the Chosen select (basic example) all the coding is within our template and we would like it to use this for the dropdown as it auto types but only selects one and is un-editable. This should be the same on the buy/sell search page for make & model.

**Example**

<https://gsmstockmarket.codebasehq.com/upload/f9971a0d-60d0a815-e0a9-529bff75486a/show/original>

Well it is implemented the way HTML was provided to us, current requirement is to add sticky drop down, basically HTML coding part will be replaced by new requirement, if Daniel can edit the HTML theme that would save us the time.

**Tel: +44 (0)1494 717321**

5. The admin panel needs access to change the conditions and spec dropdowns. Spec needs an Any value as it only really applies to handsets. It's a field unnecessary for anything else apart from a few accessories.  
*Okay, will implement the crud function in admin panel for the same, but it wasn't mentioned earlier to add crud for Specs and Condition in admin panel.*
6. Allow offers on all colours. This should mean the user specifies the colour when making an offer which I haven't seen at all.  
*Yes, I secant that, will add field in make an offer form so that users can specify the color while making an offer.*
7. Currency dropdown will display the 3 currencies already but will display the users default currency on load. This is set in the edit profile page and is taken from the member table in the database, we have a column named currency for this to use.  
*Okay, will implement the same, it was never mentioned before.*
8. Min unit price fields, If ticked the user will have to set a value. Currently this isn't the case, it should work the same as min order quantity/max unit price where a value is needed.  
*That is how it is working, I don't see any issues with the same, kindly send screenshot.*
9. Shipping Terms. On sell listing we need a better system for users as it is a bit confusing.  
Currently we have 4 shipping options. CIP, CPT are fine. A user can select it, choose the courier and add a price to the table. I would like the add shipping option inline next to the dropdown.

EXW and FOB are for users to pickup the goods themselves; think of it as collection only. Therefore we don't need courier or prices, if you look on secure-dev website you will see I added a collection option on these.

What needs to happen is a user selected FOB or EXW from the dropdown and they can just add the option with free shipping and collection already ticked with those 2 fields unable to be changed, these fields don't even have to be shown, they only need to display for other methods that aren't FOB or EXW.

Also if a user just has FOB or EXW selected in the dropdown but doesn't add any shipping options, when they click list now it will automatically add that dropdown selection to the shipping for ease of use.

<https://gsmstockmarket.codebasehq.com/upload/2f82da1d-cb16-1be0-bbb8-870bd900c659/show/original>

*Please provide the HTML of how you exactly want it to work, what I*

have at the present moment, is already been approved by Daniel, I am open to make the edits, just provide the HTML for the same.

**10.** Shipping needs to have at least one option added to the options to be listed.

Okay, will make it mandatory.

**GSMStockMarket.com Limited**

The Old Dairy, Hazlemere  
Hazlemere Crossroads  
High Wycombe, Buckinghamshire  
HP15 7LG. United Kingdom

**Tel: +44 (0)1494 717321**

11. We had an issue where images weren't saving when we went back into edit the listing. Please check and confirm this is fixed. Do we have any auto image clean procedure to avoid our server being stuck with a load of images of finished listings? Can we choose where these images are stored?

Images are working fine, You can see the added images in edit listing page. I will be able to write the script in order to clean the server images once the listing is finished or deleted, this is new point never mentioned before.

12. There was an issue with shipping terms not saving. This meant any offers couldn't be made and got auto rejected. This is a major issue. Listings should not exist unless there is one shipping term available.

I tested shipping yesterday as well, it was working fine, I will make shipping mandatory, this will be the solution of above problem.

13. Product description. This required html to format next lines, can you make it so the user is able to put a line break by pressing enter and this shows on the listing.

I would suggest to use HTML editor for the same. Daniel will be able to add the same, do it for Line break only.

14. Failed to load resource: the server responded with a status of 400 (Bad Request)

[http://secure-staging.gsmstockmarket.com/marketplace/shippings\\_to\\_couriers\\_data/8\\_@@CPT](http://secure-staging.gsmstockmarket.com/marketplace/shippings_to_couriers_data/8_@@CPT) Get this error when trying to use our site on staging server with the same files.

For this issue I will have to check the config file to check if encryption key is set as per requirement or not. Kindly send staging server creds for the same.

## **Buy/Sell Page**

1. buy/sell pages are wrong way around and don't display all active listings...Buy should display Selling Offers, Sell should display Buying Requests.

These is because of the major bug in DB structure, already working on sorting it out.

2. The basic search displays the category/product type it is under. But the listing needs to merge the make and model fields. When creating a listing they are separate. But once listed they are combined and can be searched via this. Check ticket #146 for reference as I displayed a search by Apple iPhone 4S etc and not Apple or iPhone 4S like yours shows.

Make is different field and Model is different field, in advance search

Make and model are same field, and it is not possible to recognize whether user is entering make data or model data. So we will have to split make and model in advance search.

3. On top of previous changes. The advanced search (red button) when bringing down the search needs to do the following.

**Currency** > Filters results by the currencies available

**Item Condition** > Filters results by conditions available. These can be added/changed from within the admin page when we add/remove conditions for listings etc.

**Seller Rating** > Users can filter between ratings and narrow down results. 0 to 100 is standard values.

**Item Colour** > users can search by colours set in the admin panel.

**GSMStockMarket.com Limited**

The Old Dairy, Hazlemere  
Hazlemere Crossroads  
High Wycombe, Buckinghamshire  
HP15 7LG. United Kingdom

**Tel:** +44 (0)1494 717321

**Unit price range** > same as seller rating, users can search by min to max price. Blank by default.

**MPN/ISBN** > search by listings mpn/isbn

**Listing type** > Users can search by listing type (future development)  
**Continent, region and country** > We have a country table that can be used. When a user selects a continent it will show the regions/countries under that continent in the respective fields. When they then choose a region it then narrows down the countries to that region.

For the best example view the search page on the platform and you can see how it works as we need this searching dynamically incase we add more countries and so a user can search by continents without selecting a country not in that continent and then getting no results.

**Search now and reset button at the bottom** > Don't need these, never specced it. I can add a reset button myself if need be.

**Reference Ticket #146** <https://gsmstockmarket.codebasehq.com/projects/gsm-secure/tickets/146>

Check following for my views on the same:

- : - We will make the crud for currency in admin panel
- : - Will will make crud for item condition in admin panel
- : - Rather than showing all colors which are available in admin, we will only show the colors used by users while posting the listing, these way user get's to see exact data.
- : - For MPN/ISBN we will implement the same concept as of Color.
- : - For Continent, region and country will implement the feature like you have explained.

4. **Rating** > Inside the listing table we have the users rating. This also displays their subscription in a star and the rating as a number. Again reference ticket #146 on how it should look.  
Now as you have created rating table will implement the same.
5. Buy and sell pages should have the currency it is being sold in next to the price e.g GBP, EUR, USD.  
It seems to be working for me, please test it again.
6. Remove sell stock and watch button from buying requests page.  
Will do.

## Listing Detail Page

1. Minimum order quantity shouldn't be less than 1.  
*It is implemented now, kindly check now.*
2. Should be a notice next to the bolded currency the listing is being sold in to make it clear. E.g **Sale Currency** USD  
*It is implemented, kindly check now.*
3. Making an offer, if colours set to any they should be able to select a colour for their offer.  
*Okay, will implement the same, and also will have to apply the condition in order to block the offers if it doesn't match the condition.*
4. Prices need to calculate correctly if shipping is a fixed fee/price per unit  
*Will test and make changes as per requirement.*
5. Seller/buyer Profile. Should display their actual profile and not your own.  
*Will check, but it was working fine when I checked last time.*
6. If an order doesn't meet criteria it should auto reject there and then. Why it says offer accepted and then shows as expired in the offers page I don't know. This big attempt shouldn't even be logged in orders and they should be unable to bid again after 3 failed bids.  
*It is working now, but need to add color condition and have to test again.*

## Watching

**GSMStockMarket.com Limited**

The Old Dairy, Hazlemere  
Hazlemere Crossroads  
High Wycombe, Buckinghamshire  
HP15 7LG. United Kingdom

**Tel: +44 (0)1494 717321**

1. What happens to expired listings under the watch tab? These need to auto remove after a couple days of the listing end.

Yes, will add the condition

#### **All Offers**

1. When on the offers page it should show what i have offered in price/quantity and not display what the listing price/qty is otherwise how am I going to know what i've bid? It makes no sense!

Okay, will add the information to modal.

2. There's an issue with offers meeting criteria set yet the offer popups as "offer expired" what's this about? the system is unusable! Any offers that are auto rejected and don't meet criteria should decline on the listing detail page straight away and not even be logged in all offers. Otherwise users are going to get dead offers and waste their time,

Expired offers should be removable or auto delete after a set period.

Okay, will apply the conditions, only active listing offers will display. And kindly let me know the time period to delete the expired offer listings, so that I can setup a curl function for the same.

- 2.1 For some reason it shows auto rejected deals as expired? These deals shouldn't even be coming to this stage. On the listing it says the deal is accepted when in reality it's auto rejected and put an offer on both peoples accounts wasting their time. This should say on the listing it's been auto rejected and not make any sort of offer log.

#### **Reference Ticket**

I will test this section again and will get back to you.

#### **#146**

3. Offer modal, this popup we need to remove the company. It just isn't important until the deal is put together. What it should show is the country, rating, quantity, unit price, shipping selected, grand total. Unit price isn't showing.  
Okay, will remove the company and will show data as explained above.
4. Offers should be grouped by listing. One row per listing with the amount of offers in a modal so a user can see all offers.  
Okay, will modify the same.
5. Offers accepted will need to deduct the stock quantity from the listing when it goes to open orders  
I secant that, will make the changes.

## Open Orders

1. You have a copy of the spec for how the offer flow should work.
2. When adding a tracking number it said confirm payment. Please test thoroughly as we can't even get to this stage to test ourselves.
3. When adding payment information it should display

**GSMStockMarket.com Limited**

The Old Dairy, Hazlemere  
Hazlemere Crossroads  
High Wycombe, Buckinghamshire  
HP15 7LG. United Kingdom

**Tel: +44 (0)1494 717321**

4. Buyer and seller company name was displayed wrong. It just showed your own company.

### **Dashboard widget and graph**

1. <https://gsmstockmarket.codebasehq.com/projects/gsm-secure/tickets/151>

check ticket #151 for description

**Need to work on all aspects of dashboard at the present moment.**

2. Listing widgets need to display the users own listing s and what they are watching. These need to be replicated on the users own profile page also for other users to see.

### **Order History**

1. unable to test, should display the invoice page and link to each transaction completed on the marketplace.
2. Print invoice page needs to display the correct data and not dummy data.

### **My Listings**

1. Change offers waiting to whether the listing is active or ended.
2. If you set a date in create listing to the next day and put list now it puts it here...Why? It's clearly schedule and should go into saved no?
3. Add view listing button and reference other bits from **Ticket #149**  
<https://gsmstockmarket.codebasehq.com/projects/gsm-secure/tickets/149>

### **Negotiation**

1. Unable to test. Should be for counter offers and bounce back and forth as previous discussed. If they counter back it's still negotiating.

### **Sidebar**

1. This needs to display the correct number of listings even when they are not inside the marketplace.
2. Auto update without needing to refresh the page
3. Add number for negotiations page also

Registered in England and Wales. **Company No.** 07458787

The Old Dairy, Hazlemere  
Hazlemere Crossroads  
High Wycombe, Buckinghamshire  
HP15 7LG. United Kingdom

**Tel: +44 (0)1494 717321**

### **Other**

1. Spelling and punctuation. Make sure everything is spelt correctly and make sense. I've seen warnings/notifications that make no sense. Even in the database Couriers has been spelt coriars.
2. Make sure all features you code work fine on mobile and all browsers. We had adding shipping options not working on internet explorer completely isolating a large portion of our client base.
3. Complete any outstanding tickets in full.
